AIR QUALITY CONTROL REGIONS

Background: Air pollution in the United States is recognized as a threat to both the health and welfare of its citizens. In 1967 Congress passed an amendment to the Clean Air Act of 1963 (42 U.S.C. 1872 et seq.) that provided for an intergovernmental system for the abatement, prevention and control of air pollution on a regional basis. The Act provides an orderly approach to the control of air pollution involving a coordinated effort between Federal, State, and local levels of government. The role of the Federal Government is to provide leadership and to encourage and assist in the development and operation of regional air pollution control programs. The abatement, prevention and control of air pollution at its source is the primary responsibility of State and local governments.

To set in motion the machinery for regional air pollution control, the statute directs the Federal Government to designate air quality control regions throughout the nation. This mandate was specified in Section 107 (a)(2) of the 1967 Act which directed the Secretary to "...designate air quality control regions based on jurisdictional boundaries, urban-industrial concentrations and other factors including atmospheric areas necessary to provide adequate implementation of air quality standards." To carry out this directive, 32 urban areas of immediate concern were announced in June 1968 for subsequent designation as air quality control regions. An additional 25 areas were announced for designation in March 1969. These 57 air quality control regions included

portions of all the 50 States, the District of Columbia, Puerto Rico, and the Virgin Islands. Designation of the initial 32 regions was completed on April 24, 1970, and the second 25 regions on November 10, 1970. In his Environmental Message to Congress, delivered on February 10, 1970, President Nixon ordered an acceleration in the designation of interstate air quality control regions. On April 5, 1970, 34 additional interstate areas were announced for designation during the remainder of 1970. These included the remaining interstate areas of concern in the Nation.

In addition, during the Summer of 1970 various States requested that the balance of their State be divided into multiple air quality control regions. Most of the statewide requests recommended boundaries for regions to cover relatively large segments of the State and often coincided with State planning or air pollution control administrative regions.

On December 2, 1970, the Environmental Protection Agency was created to administer programs of air, water, solid waste, radiation, and pesticide pollution control. Accordingly, all functions and responsibilities of the National Air Pollution Control Administration were transferred from the Department of Health, Education, and Welfare, to the Administrator of the Environmental Protection Agency.

On December 31, 1970, President Nixon signed into law the Clean Air Amendments of 1970. These Amendments provided 90 days

for the Administrator of the Environmental Protection Agency to complete designation of any interstate area or "major" intrastate area which he deemed necessary or appropriate for the attainment and maintenance of ambient air quality standards. In implementing this legislation, additional regions were designated throughout the Nation, resulting in a total of 235 air quality control regions. In addition, remaining areas in 10 States and 2 territories automatically became regions by operation of law, after the 90-day statutory requirement. Thus, a total of 247 air quality control regions have been established. (By designation and operation of law).

In addition to the designation of regions, the Administrator is also required by the Act to publish air quality criteria for various pollutants which are harmful to health or welfare, and to publish reports on the techniques which can be employed to control these pollutants. The Administrator is authorized to promulgate national primary and secondary ambient air quality standards. Primary standards are to protect the health. Secondary standards are to protect public welfare from any known or anticipated adverse effects of a pollutant. Pollutants for which air quality criteria have already been issued must have national primary and secondary ambient air quality standards established by April 30, 1971. Criteria and control technology guideline documents have been published for sulfur oxides, particulate matter, hydrocarbons, carbon monoxide, photochemical oxidants, and nitrogen oxides.

Now that all regions have been designated, the next phase provides that States hold hearings and adopt plans for implementation of national ambient air quality standards, applicable to the air quality regions. These plans are to be submitted to the Administrator within nine months after the promulgation of the standards. These plans must provide for the attainment of primary air quality standards within 3 years after approval by the Administrator, and for the attainment of secondary standards within a reasonable time.

The balance of this report contains maps and data describing the air quality control regions presently designated through the 50 States, District of Columbia, Guam, American Samoa, Puerto Rico and the Virgin Islands. Names for these regions were chosen to correspond to a local name, geographic area, major city in the region, or a State-requested name.

First, Table I consists of a summary of air quality control regions according to type (interstate, intrastate, or remaining area) and number of air quality control regions in each State or territory.

Following Table I are maps, in alphabetical order, of each of the 50 States and the District of Columbia. Maps of American Samoa, Guam, Puerto Rico and the U. S. Virgin Islands are also included. These maps show boundaries of the air quality control regions affecting them. Appearing after each map is a list of the air quality control regions and the jurisdictions included within them.

The map illustrates the Air Quality Control Regions (AQCRs) in Oregon. The regions are defined by thick black lines. The Northwest Oregon Intrastate AQCR covers the western part of the state, including counties like Clatsop, Tillamook, Washington, Multnomah, and Clackamas. The Portland Interstate AQCR (Ore.-Wash.) is located in the northwestern corner. The Central Oregon Intrastate AQCR covers the central part, including counties like Deschutes, Crook, and Jefferson. The Eastern Oregon Intrastate AQCR covers the eastern part, including counties like Lake, Elmore, and Harney. Major cities like Portland, Eugene, and Medford are marked. A scale bar at the bottom indicates distances from 0 to 75 miles.
